MOHAMMAD AYAN KHAN

AI/ML DIPLOMA STUDENT | PYTHON DEVELOPER

+91 85918 73988 | ayankhan686891@gmail.com | Govandi, Mumbai | github.com/ayankhann23

PROFESSIONAL SUMMARY

AI/ML diploma student with project experience in image classification, time-series forecasting and Python application development. Built a CNN-based CT image classification project using transfer learning with ResNet18, and developed Flask applications integrating databases and AI APIs. Familiar with Python, PyTorch, Pandas, NumPy, SARIMA and Git. Looking for an entry-level AI/ML internship to apply these skills while learning from an engineering team.

EDUCATION

Diploma, Artificial Intelligence & Machine Learning 2024 – 2027 (Expected)
Government Polytechnic Mumbai | 5th semester | **Semester 1–4 average: 85.31%**

SSC (Class 10) 2023
Shree Geeta Vidyalaya | **88%**

TECHNICAL SKILLS

Programming Languages	Python, SQL, HTML, CSS
Machine Learning	CNN, Transfer Learning, Deep Learning, PyTorch, Time-Series Forecasting, ARIMA, SARIMA
Python Libraries	Pandas, NumPy, Matplotlib, Seaborn, SpeechRecognition, Text-to-Speech
Frameworks & Databases	Flask, SQLite, Oracle Database
Developer Tools	Git, GitHub, Jupyter Notebook, Google Colab, VS Code, PyCharm, Arduino IDE
Hardware	Arduino UNO, R307 fingerprint sensor

PROJECTS

Lung Cancer Detection from CT Scans
Technologies: *Python | PyTorch | ResNet18 | Flask | SQLite*

- Fine-tuned a pre-trained ResNet18 model to classify chest CT images as benign, malignant, or normal.
- Developed a Flask and SQLite application with login, image upload, prediction results, history, and performance dashboard.

Air Pollution Prediction Using SARIMA
Technologies: *Python | SARIMA*

- Used historical data to forecast Mumbai air pollution levels, applying SARIMA to account for trend and seasonality.

AI Mock Interview Simulator Team project
Technologies: *Python | Flask | NVIDIA API*

- Built an AI Mock Interview Simulator that extracts resume details and generates personalized interview questions.
- Integrated camera and microphone for face detection and voice-based interviews.

Jarvis: Voice and Text AI Assistant Team project
Technologies: *Python | SpeechRecognition | Text-to-Speech | AI API*

- Developed a team-based assistant that accepts voice or text input, sends queries to an AI API and responds aloud.

Smart Online Purchase Advisor Team project
Technologies: *Python*

- Developed an AI-based Smart Purchase Advisor to compare products, prices, features, and customer reviews, helping users find the best deals and make informed buying decisions.

Smart Door Lock Using Arduino Team project
Technologies: *Arduino UNO | R307 Fingerprint Sensor*

- Implemented fingerprint enrolment, storage, matching and verification using an R307 sensor connected to Arduino UNO and Solenoid lock.

ACHIEVEMENTS & LEARNING

- Participated in the internal round of the Smart India Hackathon (SIH), Government Polytechnic Mumbai.
- Currently building data-science foundations through self-study of Pandas and NumPy.

LANGUAGES

English, Hindi, Marathi, Urdu
